

Homework 4 – CSS Basics

Name: Can Atalay

Department: Computer Engineering

University: Near East University

1. Which type of CSS is coded in the body of the web page as an attribute of an HTML tag?

Answer: Inline CSS

Explanation:

Inline CSS is written directly inside an HTML element using the style attribute.

For example: `<p style="color:red;">Text</p>`

2. Which of the following is the CSS property used to set the background color of a web page?

Answer: background-color

Explanation:

The background-color property is used in CSS to define the background color of an element or the entire page.

3. Which of the following describe two components of CSS rules?

Answer: selectors and declarations

Explanation:

A CSS rule consists of a selector and a declaration block.

The selector targets the HTML element, and the declaration defines the style.

4. Which of the following associates a web page with an external style sheet?

Answer:

`<link rel="stylesheet" href="style.css">`

Explanation:

The `<link>` tag is used inside the `<head>` section to connect an external CSS file to the HTML page.

5. Which of the following configures a background color of #00CED1 for a web page using CSS?

Answer:

```
body {  
    background-color: #00CED1;  
}
```

Explanation:

The background-color property is applied to the body element to change the entire page's background color.

6. Find the Error

Answer:

The error occurs because the `<style>` tag is not properly closed.

Explanation:

In the given code, a second `<style>` tag is used instead of the correct closing tag `</style>`.

This causes the browser to misinterpret the CSS and prevents the page from displaying correctly.

Correct Code:

```
</style>
```
