

Homework 5 – Web Design Principles

Name: Can Atalay

Department: Computer Engineering

University: Near East University

1. Which of the following are the three most common methods for organizing websites?

Answer: hierarchical, linear, and random

Explanation:

Websites are commonly organized using three structures:

hierarchical (tree structure), linear (step-by-step navigation), and random (non-linear navigation).

2. Which of the following are the four principles of the Web Content Accessibility Guidelines?

Answer: perceivable, operable, understandable, and robust

Explanation:

These four principles ensure that web content is accessible to all users, including people with disabilities.

3. Which of the following are influenced by the intended or target audience of a site?

Answer: all of the above

Explanation:

The target audience affects colors, fonts, and the overall design of the website to ensure usability and appeal.

4. Which of the following recommended design practices apply to a website that uses images for its main site navigation?

Answer: Both a and b

Explanation:

Providing alternative text improves accessibility, and including text links ensures usability if images fail to load.

5. Which of the following is a color scheme that consists of two colors that are opposite each other on the color wheel?

Answer: complementary

Explanation:

Complementary colors are directly opposite each other on the color wheel and create strong contrast.

6. Choose two sites that are similar in nature or have a similar target audience.

Selected Websites:

Amazon.com and Alibaba.com

Answer:

Both Amazon and Alibaba are large e-commerce platforms designed for online shopping and global trade.

Repetition:

Both websites use repeated layouts such as product grids, navigation bars, and consistent category structures.

Contrast:

They use contrasting colors to highlight important elements like prices, discounts, and call-to-action buttons.

Proximity:

Related items such as product images, descriptions, and prices are grouped together to improve usability.

Alignment:

Content is well-aligned in grids, making the layout clean, organized, and easy to navigate.

These design principles help both websites provide a user-friendly and efficient shopping experience.
