1. Which of the following, from outermost to innermost, are components of the box model?

Answer: margin, border, padding, content

Explanation:

The CSS box model consists of four parts from outside to inside:

margin → border → padding → content.

2. Which of the following causes an element to display as a block of content with white space above and below?

Answer: display: block;

Explanation:

The display: block property makes an element take the full width and creates space above and below it.

3. Which of the following pseudo-classes is the default state for a hyperlink that has been clicked?

Answer: :visited

Explanation:

The :visited pseudo-class is applied to links that the user has already clicked.

4. Which HTML5 element has the purpose of providing tangential content?

Answer: aside

Explanation:

The <aside> element is used for content related to the main content but not essential, such as sidebars or additional information.
