

Homework 10 – E-Commerce Survey Results

Name: Can Atalay

Department: Computer Engineering

University: Near East University

E-Commerce Survey Report

This survey was conducted with 20 people to analyze online shopping habits and the popularity of e-commerce.

Survey Results

a. How many have purchased an item online?

18 people have purchased items online.

b. How many have shopped but not purchased online?

2 people have browsed online stores but did not complete a purchase.

c. How many purchase online once a year? Once a month? Once a week?

- Once a year: 3 people
- Once a month: 11 people
- Once a week: 4 people

d. Age Range of Participants

- 18–25 years old: 12 people

- 26–39 years old: 5 people
- 40–50 years old: 2 people
- Over 50 years old: 1 person

e. Gender of Participants

- Male: 11 people
- Female: 9 people

f. Education Level

- High school: 4 people
- Some college: 7 people
- College graduate: 6 people
- Graduate school: 3 people

g. Favorite Online Shopping Sites

The most popular online shopping websites mentioned in the survey were:

- Amazon
- Trendyol
- Hepsiburada
- eBay
- AliExpress

Survey Analysis and Conclusions

The survey results show that e-commerce is very popular among people of different age groups and educational backgrounds. Most participants have purchased products online at least once, and many shop online regularly every month.

The largest group of online shoppers was between the ages of 18 and 25. This suggests that younger people are more comfortable using technology and online payment systems. Monthly online shopping was the most common shopping frequency, showing that e-commerce has become part of daily life for many users.

Amazon and Trendyol were the most frequently mentioned shopping websites because of their wide product selection, fast delivery systems, and user-friendly interfaces.

Research from organizations such as Pew Research Center and eMarketer also supports the conclusion that e-commerce continues to grow rapidly worldwide. Mobile shopping, secure payment systems, and easy access to online stores have increased consumer confidence in online shopping.

Supporting Research

According to Pew Research Center, online shopping has become one of the most common online activities worldwide.

eMarketer reports that global e-commerce sales continue to increase every year because consumers prefer convenience and fast access to products.
